Strip Edges are Rounded for Smooth Passage Through The Door

Standard PVC strip material is acceptable for indoor and outdoor applications and accommodates low, medium and heavy service applications. PVC strip material conforms to California State Fire Marshall requirements for flame resistance. Operating temperature is from -10° F to 140° F. Meets USDA, FDA and Agriculture Canada requirements.

Low temperature PVC strip material is produced with FDA approved ingredients and is for use in the food processing industry. This is also the only appropriate material for freezer applications. This PVC material remains flexible from -50° F to 140°F. and also meets USDA, FDA and Agriculture Canada requirements.

Ribbed PVC strip material is available in both the standard & low temperature formats. The ribbed configuration provides maximum strength & durability and maintains clarity longer due to the protective characteristics of the ribs.
